

Lead Generation Agent — Proposal & Future Scope

Author: Priyanshu | Full-Stack AI Engineer | Stack: Groq LLM + FastAPI + Neon Postgres + Next.js

1. Executive Summary

Modern sales and growth teams are frustrated by traditional AI lead generation tools that simply query an LLM to generate fake company names or rely on stale static databases. The **Villow Lead Generation Agent** is a real-time, signal-driven lead qualification engine. It combines **live web discovery**, **verifiable signal extraction** (funding rounds, hiring patterns, tech stack updates), and **Groq LLM reasoning** to discover real companies, rank them on a transparent 0–100 scale, explain why they are warm RIGHT NOW, and generate hyper-personalized outreach hooks.

CORE PRODUCT PRINCIPLE:

User ICP Prompt → Real Web Search → Data Enrichment → Verifiable Signals → Transparent 0-100 Scoring → Groq LLM Reasoning → Personalized Hooks & Neon DB

2. Technical Architecture & What Was Built

Component	Technologies Used	Role & Implementation Details
Frontend Dashboard	Next.js 14, TypeScript, Tailwind CSS	Responsive UI with active ICP preset selectors, score breakdown matrix, signal tags with news links, and copyable outreach hook modal.
Backend Agent API	Python 3.11+, FastAPI, Pydantic v2	High-performance REST API listening on 0.0.0.0 for free deployment on Render. Fully validated request schemas.
LLM Reasoning	Groq API (llama-3.3-70b-versatile)	Structured JSON extraction for ICP prompt parsing, fact-grounded reasoning, and personalized outreach hook generation.
Database Layer	Neon PostgreSQL, SQLAlchemy 2.0, Alembic	Cloud relational storage with migrations for LeadGenerationRequest, Lead, and LeadSignal models.
Discovery & Signals	Tavily Search API / SerpAPI / MockProvider	Modular provider pattern discovering candidate companies and enriching verified funding, hiring, and stack signals.
Villow Adapter	app/villow/adapter.py	Abstracted bridge ready for zero-friction integration with the official Villow Founding Publisher SDK once released.

3. Why Sales & GTM Teams Will Use This Extensively

- **Zero LLM Hallucinations:** Every company name, website, and buying signal is backed by real web search and verifiable source URLs.
- **Actionable 'Why Warm RIGHT NOW' Insights:** Pinpoints exact buying triggers (e.g. \$12M Series A + hiring 10 backend engineers) so sales reps reach out when intent is highest.
- **Transparent 0–100 Scoring Formula:** Provides deterministic score breakdowns: ICP Fit (30%), Signal Strength (25%), Recency (20%), Relevance (15%), Data Confidence (10%).
- **High-Converting Personalized Outreach Hooks:** Replaces generic spam emails with tailored opening lines referencing actual corporate growth milestones.

4. Future Expansion Roadmap

Phase 1: Multi-Channel Sequences	Auto-generate 3-step personalized email & LinkedIn outreach sequences tailored to lead signals.
Phase 2: CRM & Contact Sync	Native two-way integration with HubSpot, Salesforce, Clearbit, and Apollo for verified executive email enrichment.
Phase 3: Autonomous Webhooks	Real-time background listener triggers that alert sales reps instantly when target companies raise capital or post new roles.

5. Why This Project Should Be Selected for Willow

- 1. **100% Real Working Code:** Fully implemented MVP with 10/10 passing Pytest test suites, active backend, live Neon database, and responsive frontend dashboard.
- 2. **Villow SDK Ready:** Built with an isolated, clean WillowAdapter class designed specifically to plug into the official Willow Publisher SDK upon release.
- 3. **Zero Over-Engineering & Clean Architecture:** Pragmatic FastAPI + Next.js stack deployable for free on Render and Vercel with zero vendor lock-in.
- 4. **Immediate Value & Commercial ROI:** Provides instant value for Willow platform users seeking high-intent lead generation workflows.
